

Multidisciplinary & International
Summer School

Urban River Restoration

29 June – 3 July 2026

Ústí nad Labem, Czech Republic

Interreg
CENTRAL EUROPE

Co-funded by
the European Union

ReBioClim

What is it about?

Students from various countries and disciplines are invited to meet in Ústí nad Labem (Czech Republic) to attend the Summer School to develop nature-based solutions for urban river restoration.

After visiting the real situation on-site, students in teams will design appropriate measures to enhance biodiversity and to make the riverside more liveable for both the human and other Earth inhabitants. These measures will be afterwards assessed from the

ecological, spatial and social perspectives. Best practice solutions should be identified and characterised as final output. The course participation will be rewarded **5 ECTS credit points** by the hosting Jan Evangelista Purkyně University Ústí nad Labem.

What's included?

No participation fee!

Free meals included!

Lunch and dinner

Affordable
accommodation

Rooms with one or two beds
